

Architecture

horizontal

i.e : 3 layered architecture

One change can affect all 3 layers.

other feature can be affected for this change

technology coupled

flexible on business requirements

vertical

each  
service  
can be  
assigned  
to a team

Responsible for  
all its users

Delivery  
Service

Order  
Service

Auth  
Service

coupled on Business Requirements

Technology Flexible

- each service must be deployed independently
- each service should have its own database, shared databases should be avoided at all cost
